

ydata-profiling

What is it?

Automatically analyzes tabular datasets and creates a detailed HTML report.

Why use it?

Understand your dataset before building models.

How to use it (simple)

```
pip install ydata-profiling
from ydata_profiling import ProfileReport
profile=ProfileReport(df)
profile.to_file('report.html')
```

Example

Check missing values, outliers, correlations and duplicates in seconds.

Pros

Very fast, saves hours, beginner-friendly.

Limitations

Only for tabular data.
